Core Components of Road Geometry in Part 4A

Part 4A provides detailed guidance on the geometric elements that define a road's physical layout. These include:

- Horizontal Alignment**

Horizontal alignment pertains to the plan view layout of the road, including curves, straight sections, and transitions. Key considerations include:

 - Radius of Curves:** Ensuring curves have appropriate radii to accommodate design speed while maintaining safety.
 - Superelevation:** Banking of curves to counteract centrifugal forces, improving comfort and safety.
 - Transition Curves:** Using spiral or clothoid transitions to facilitate gradual changes from straight to curved alignments, reducing driver discomfort and vehicle instability.
- Vertical Alignment**

Vertical alignment deals with the elevation profile of the road, encompassing grades and vertical curves:

 - Grades:** Slope steepness must balance safety, drainage, and construction costs.
 - Vertical Curves:** Smooth transitions between different grades to prevent abrupt changes, enhancing visibility and ride comfort.
 - Sight Distance:** Vertical profiles influence sight distances, with guidelines ensuring adequate stopping and overtaking sight distances.
- Cross-Section Design**

This involves the width and composition of the road surface and roadside features:

 - Carriageway Width:** Based on traffic volume, vehicle types, and safety standards.
 - Shoulders:** Providing recovery space, accommodating emergencies, and

facilitating maintenance. Median and Central Reserves: For safety separation of opposing flows. Roadside Clear Zones: Areas free of obstacles, enabling vehicle recovery in case of run-off-road events.

4. Intersection and Access Design

Designing safe and efficient intersections and access points is critical.

Angles and Spacing: Properly spaced intersections with appropriate angles reduce conflict points.

Turning Radii: Ensuring turning paths are navigable and safe.

Channelization and Signage: Guiding drivers and minimizing conflicts.

Design Standards and Criteria in Part 4A

Part 4A offers specific standards and criteria to guide the design process, including:

Design Speeds: Establishing appropriate speeds for different road types based on context and safety considerations.

Sight Distance Requirements: Minimum lengths for stopping, overtaking, and decision sight distances, tailored to design speeds and vehicle characteristics.
