- Battery
- Ignition Control Module (if applicable)
- Fuses and Fusible Links
- Wiring Harnesses

The wiring from the starter begins at the ignition switch, passes through relays and fuses, and finally powers the starter motor to crank the engine.

Wiring Diagram from Starter: Basic Layout

The wiring diagram from the starter encompasses all electrical connections that activate the starter motor and its related components.

Primary Wires and Their Functions

Below are the main wires involved in the Acura RSX starter wiring diagram:

- Battery cable (large gauge wire):** Connects directly from the positive terminal of the battery to the starter motor's main terminal (often labeled 'B' or 'M'). This wire supplies the necessary current to turn the starter motor.
- Starter solenoid wire (trigger wire):** Usually a smaller gauge wire that activates the solenoid coil inside the starter. When energized, it engages the solenoid to connect the battery cable to the starter motor.
- Ignition switch wire:** Sends power from the ignition switch to the starter relay or directly to the starter solenoid (depending on the vehicle's wiring design).
- Neutral safety switch or clutch switch wiring:** Ensures the vehicle can only start in Park or Neutral (automatic transmissions) or when the clutch pedal is pressed (manual transmissions). This wiring interrupts the circuit if the vehicle is not in the correct gear.

Detailed Wiring Diagram from Starter: Step-by-Step Explanation

Understanding the wiring diagram involves examining each connection point, wire color, and relay involved.

- Battery to Starter Main Terminal**
Wire Color: Usually red or red with a stripe (e.g., red with a black stripe).
Function: Supplies high current directly from the battery to the starter motor.
Connection Point: Large terminal on the starter motor labeled 'B' or 'M'.
- Ignition Switch to Starter Relay**
Wire Color: Typically, a light green or yellow wire.
Function: When the key is turned to 'Start,' this wire receives 12V and energizes the starter relay.
Connection: From the ignition switch (accessory or start position) to the control circuit terminal of the relay.
- Starter Relay to Starter Solenoid**
Wire Color: Often the same as above; sometimes a different color like white or black with a stripe.
Function: When the relay coil is energized, it closes the contact, allowing current to flow to the starter solenoid.
Connection: Controls the activation of the starter solenoid.
- Starter Solenoid Control Wire**
Wire Color: Usually a thin wire,

often purple or green. Function: Activates the solenoid to engage the starter gear with the flywheel. Connection: From the starter relay or ignition switch to the solenoid terminal.

5. Neutral Safety or Clutch Switch Wiring

Function: Prevents engine start unless the transmission is in Park or Neutral (automatic) or clutch pedal is pressed (manual). Wiring Path: Connects in series with the ignition switch circuit and the starter relay coil. Wiring Colors: Varies; often black/yellow or black/white.

Wiring Diagram from Starter: Practical Application

To interpret the wiring diagram in practice, follow these steps:

- Step 1: Identify the Main Power Supply** Locate the battery positive terminal. Trace the thick red wire to the starter's main terminal. Ensure the wire is intact and free of corrosion.
