Sample Civil Engineering Aptitude Test Questions and Answers

Below, we present a selection of common questions with detailed solutions to help you grasp the question patterns and develop problem-solving strategies.

1. Basic Mathematics and Numerical Aptitude

Question: A cement bag contains 50 kg of cement. If a construction project requires 0.2 cubic meters of concrete, how many cement bags are needed? (Assume the cement density is 1440 kg/m³, and the mix ratio is 1:2:4 for cement, sand, and aggregate respectively).

Answer: First, find the amount of cement required for 1 cubic meter of concrete:
 Cement ratio = 1 part
 Total parts = 1 + 2 + 4 = 7
 Cement volume in 1 m³ concrete = $(1/7) \text{ m}^3$
 Calculate the weight of cement for 1 m³:
 Cement weight = volume × density = $(1/7) \times 1440 \text{ kg} \approx 205.7 \text{ kg}$
 Now, for 0.2 m³:
 Cement needed = $0.2 \times 205.7 \approx 41.14 \text{ kg}$
 Number of cement bags: Bags needed = $41.14 \text{ kg} / 50 \text{ kg} \approx 0.82$
 Since partial bags aren't practical, at least 1 bag is needed.
Final Answer: 1 cement bag

2. Structural Mechanics

Question: A simply supported beam of span 6 meters carries a point load of 10 kN at its center. What is the maximum bending

moment in the beam? Answer: For a simply supported beam with a central point load, the maximum bending moment occurs at the center and is given by: $M_{\max} = \frac{P \times L}{4}$ Where: $(P = 10 \text{ kN})$ $(L = 6 \text{ m})$ Calculating: $M_{\max} = \frac{10 \times 6}{4} = \frac{60}{4} = 15 \text{ kNm}$ Final Answer: 15 kNm

3. Surveying and Geomatics Question: The distance between two points A and B is 300 meters. The measured angles at point A and point B are 45° and 135° , respectively. What is the approximate bearing from point A to point B? Answer: In surveying, the bearing from A to B can be estimated using the measured angles. Assume the angles are measured clockwise from North. Since the angles given are at points A and B, and the distance is known, the bearing can be approximated considering the general direction. The bearing from A to B is roughly the angle from North, considering the geometry. If the measured angle at A (toward B) is 45° , and at B (toward A) is 135° , the approximate bearing from A to B is NE ($N45^\circ E$). Final Answer: North 45° East ($N45^\circ E$)

4. Materials and Construction Techniques Question: Which of the following materials is most suitable for constructing a bridge in a seismically active zone? a) Reinforced concrete b) Masonry c) Timber d) Steel Answer: In seismic zones, materials with high ductility and strength are preferred to absorb earthquake energy safely. Steel and reinforced concrete are both strong and ductile, but steel is particularly known for its excellent ductility and ability to withstand seismic forces. Correct Option: d) Steel

5. Environmental Engineering Question: What is the primary purpose of a sedimentation tank in wastewater treatment? Answer: A sedimentation tank is used to remove settleable solids from wastewater by allowing gravity to settle particles at the bottom. Its primary purpose is to reduce the load of suspended solids and improve water clarity before further treatment. Final Answer: To remove suspended solids through gravitational settling
