Is ANSI/AWWA C652-02 still the current standard for disinfecting water mains?

No, ANSI/AWWA C652-02 has been superseded by newer revisions. The most recent standards should be referenced for current procedures, but C652-02 laid the foundation for water main disinfection practices.

What are the key procedures outlined in ANSI/AWWA C652-02 for disinfecting water mains?

The standard details procedures such as pre-flushing, chlorination with sodium hypochlorite, maintaining proper contact time, and flushing to ensure the disinfection process effectively eliminates microbial contamination.

How does ANSI/AWWA C652-02 recommend verifying the effectiveness of water main disinfection? It recommends collecting water samples from multiple locations within the main and testing for residual chlorine levels and microbial presence to confirm effective disinfection.

What are the requirements for residual chlorine levels according to ANSI/AWWA C652-02?

The standard specifies maintaining a minimum free chlorine residual of at least 50 mg/L during disinfection, with levels monitored throughout the process to ensure efficacy.

Can ANSI/AWWA C652-02 be applied to all types of water mains?

The standard primarily applies to new or repaired water mains that require disinfection before service, but specific procedures may vary based on pipe material and site conditions.

What safety considerations are emphasized in ANSI/AWWA C652-02 during disinfection?

The standard emphasizes proper handling and storage of chlorine, avoiding over-chlorination, ensuring proper ventilation, and protective measures for workers to prevent health hazards.

How does ANSI/AWWA C652-02 address disposal of residual disinfectants after cleaning?

It recommends flushing the water mains thoroughly after disinfection to remove residual chlorine and safely disposing of the waste to prevent environmental impact.

Are there specific equipment requirements outlined in ANSI/AWWA C652-02 for disinfection?

Yes, the standard specifies using appropriate chlorination equipment such as chemical injectors, meters, and flushing devices to ensure precise application and effective disinfection.
