Common Topics and Sample CCNA 2 Questions

Routing Protocols and Their Characteristics Routing protocols are at the core of dynamic routing. CCNA 2 emphasizes understanding how different protocols function, their advantages, and their configurations.

Sample Question: Which routing protocol uses hop count as its metric? **Answer:** RIP (Routing Information Protocol) **Explanation:** RIP is distance-vector protocol that determines the best path based on hop count, with a maximum of 15 hops.

VLANs and Trunking VLANs segment networks logically, enhancing security and reducing broadcast domains. Trunking allows multiple VLANs to traverse a single physical link.

Sample Question: What protocol is used to negotiate trunk links between switches? **Answer:** DTP (Dynamic Trunking Protocol) **Explanation:** DTP automates the configuration of trunk links, facilitating VLAN traffic across switches.

Inter-VLAN Routing Inter-VLAN routing enables devices on different VLANs to communicate. This can be achieved via router-on-a-stick or multilayer switches.

Sample Question: Which device performs inter-VLAN routing in a switched network? **Answer:** Layer 3 switch or router **Explanation:** Since VLANs are separate broadcast domains, a Layer 3 device routes traffic between them.

WAN Technologies CCNA 2 also covers WAN connectivity options such as PPP, Frame Relay, and MPLS.

Sample Question: Which WAN protocol encapsulates multiple Layer 3 protocols over serial links? **Answer:** PPP (Point-to-Point Protocol) **Explanation:** PPP supports multiple Layer 3 protocols and provides authentication features.

Network Security Fundamentals Understanding basic security measures, including ACLs and port security, is vital.

Sample Question: What command is used to create an extended ACL in Cisco IOS? **Answer:** `access-list [number] permit/deny [protocol] [source] [destination]` **Explanation:** Extended ACLs specify source/destination IPs and protocols to filter traffic.
